Pollock & Sons Crane Hire Ltd

To Whom It May Concern

Pollock & Sons Crane Hire were contracted to provide our craneage requirements for our first stage of a multi staged project at our Awatoto Acid Plant between June to September 2011.

The project required four cranes at its peak with periods requiring seven days per week operation, Pollock's were very easy to work with and didn't hesitate to fit into with our changing demands.

Their planning, scheduling, H&S and operator experience was top class which made it very easy to manage the interface of several work areas with the craneage requirements.

Due to adverse weather conditions and time restraints, our heavy lifts for the installation of our new heat exchangers was undertaken at night, Pollock's again were very accommodating in their flexibility and commitment to getting the job done at short notice.

It is without hesitation that I would recommend Pollock's for any craneage work to be undertaken.

I am happy to verbally discuss Pollock's capabilities with any interested parties, see contact details below

Yours Faithfully
